

Soo Yun Kim

kimsy9512@gmail.com | +1 (226) 739-3666 | Toronto, ON | [Portfolio](#) [LinkedIn](#) [Github](#)

Software Engineer with 5 years of experience building and maintaining enterprise applications, system integrations, and high-availability production systems.

Experienced in full-stack development using C#/.NET, Java/Spring, and modern JavaScript frameworks, with strong expertise in API development, database optimization, and cloud deployment on AWS.

Proven track record of improving system reliability, scaling enterprise platforms, and delivering solutions that support high-volume transactional environments.

CORE COMPETENCIES

- **Application Development:** Enterprise Application Development, Application Integration, Application Architecture, API Development, System Integration
- **Software Engineering Practices:** SDLC, Agile Development, CI/CD, System Design, Microservices Architecture
- **Professional Skills:** Technical Communication, Cross-Functional Collaboration, Problem Solving, Continuous Learning, Attention to Detail

TECHNICAL SKILLS

- **Frontend:** React Native, JavaScript, TypeScript, HTML, CSS
- **Backend:** C#, .NET (Core/Framework), Java (Spring Boot), Node.js
- **Databases:** MSSQL, MariaDB, Oracle, PostgreSQL
- **Cloud & Infrastructure:** AWS (EC2, S3, CloudFront, Route 53), Cloudflare, Supabase
- **APIs & Integration:** RESTful APIs, JSON, XML, API Design
- **DevOps & Tools:** CI/CD Pipelines (GitLab), Docker, Git, SVN, JIRA, Confluence
- **Data & Backend Processing:** Stored Procedures, Data Modeling (ERDs), Batch Processing, Data Mapping
- **Domain Expertise:** Enterprise Systems (MES, CRM, WMS, S&OP, Groupware), System Integration, Incident Resolution, Workflow Optimization, Real Time Monitoring

WORK EXPERIENCE

LG CNS Canada

May 2024 – Jun. 2025

Software Engineer

Windsor, ON

- Maintained and enhanced large-scale C#/.NET enterprise applications processing high-volume transactional data in live production environments, ensuring high reliability and performance.
- Developed and maintained RESTful APIs integrating MES and WMS platforms with enterprise systems.
- Achieved 99.9% system availability and resolved production incidents within 5 minutes through root cause analysis, debugging, and performance tuning.
- Improved database scalability by implementing advanced MSSQL indexing strategies, significantly reducing query latency and eliminating data bottlenecks.
- Achieved two consecutive months of zero downtime by taking ownership of WMS production systems on short notice and implementing proactive monitoring.
- Collaborated in Agile SDLC environments using JIRA and Confluence for release planning, incident tracking, and technical documentation.

Navien

Sep. 2022 – Feb. 2024

Software Engineer

Seoul, South Korea

- Developed and optimized RESTful APIs and microservice components supporting ERP SAP-CRM integrations and logistics platforms.
- Designed and implemented batch-processing data pipelines using MSSQL stored procedures, stabilizing cross-platform system integrations and eliminating operational downtime.
- Conducted large-scale MSSQL data analysis and modeling to support S&OP planning systems and cross-department reporting.

- Increased active user adoption from 30% to 90% by refactoring UI components and optimizing backend processing logic on a Java/Spring-based logistics tracking platform.
- Reduced annual licensing costs by 20M KRW through automating inactive user deactivation with Oracle SQL.
- Deployed and maintained applications in AWS environments (EC2, S3, CloudFront, Route 53), supporting scalable and secure service delivery.
- Participated in CI/CD pipelines and Agile development processes, collaborating with stakeholders to estimate effort, prioritize requirements, and deliver high-quality releases.

GL

Jun. 2020 – Aug. 2022

Software Developer

Daegu, South Korea

- Engineered a TCP/IP-based data transmission system for a clinical trial platform, achieving zero data loss and ensuring reliable synchronization across distributed devices.
- Developed and maintained C#/.NET desktop applications for clinical and enterprise environments, focusing on system reliability and data accuracy.
- Designed and implemented relational database schemas and managed application data using MariaDB.
- Conducted application testing, debugging, and performance optimization to improve system stability and user experience.
- Produced and maintained technical documentation supporting long-term system maintenance and enhancements.

TECHNICAL PROJECTS

FreeLot (Personal Project)

Feb. 2026 – Present

Software Developer

Toronto, ON

- Architected and developed a cross-platform mobile application using React Native and TypeScript to help users locate free parking and calculate optimal walking routes.
- Implemented backend API integration and optimized location data processing to ensure responsive real-time map interactions.
- Integrated Google Places API and Google Maps Platform to provide real-time location data, custom markers, and interactive mapping features.
- Implemented efficient state management and optimized map interaction performance to ensure smooth UI transitions and responsive user experience.
- Built responsive mobile interfaces using React Native components, optimizing map rendering and interaction performance.

Donation Management System

Jul. 2019 – Aug. 2019

Software Developer

Seattle, WA

- Developed a Python-based data automation tool to process donation records stored in Excel spreadsheets, significantly reducing manual financial reporting tasks.
- Implemented data aggregation logic to consolidate multi-sheet and multi-year financial data, improving efficiency and reporting accuracy.
- Automated repetitive spreadsheet calculations and reporting workflows to streamline financial data management.

EDUCATION

University of Washington Bothell

Sep. 2017 - Jun. 2019

Bachelor of Science, Computer Science & Software Engineering

Bothell, WA

Shoreline Community College

Jan. 2016 - Jun. 2017

Associate of Arts, Computer Science

Shoreline, WA
