

Soo Yun Kim

Full-Stack Software Engineer

Toronto, Ontario 

+1-226-739-3666 

kimsy9512@gmail.com 

<https://ksy1231.github.io/portfolio/> 

Skills

- Languages & Frameworks: C#, Java, JavaScript, TypeScript, Node.js, .NET (ASP.NET, WPF, WinForms), Spring MVC, HTML/CSS, Python, C++, VBScript
- Databases & Data Management: MSSQL, MariaDB, Oracle SQL, Stored Procedures, Data Modeling (ERDs), Batch Processes, Data Mapping
- Cloud & Infrastructure: AWS (EC2, S3, CloudFront, Route 53), RESTful APIs, CI/CD Concepts, JSON/XML
- Tools & Methodologies: Git, SVN, JIRA, Confluence, Visual Studio, Eclipse
- Systems & Operations: Enterprise Systems (MES, CRM, WMS, S&OP, Groupware), System Integration, Incident Resolution, Root-cause Analysis, Workflow Optimization

Experiences

Software Engineer *LG CNS Canada, Windsor, ON*

[May 2024 – June 2025]

- Maintained and enhanced enterprise-level high-volume data processing & management systems built with C# and .NET, optimizing system architecture to handle high-volume data traffic.
- Performed rapid root-cause analysis and debugging, ensuring **99.9% system availability** by resolving critical issues in live production environments **within 5 minutes**.
- Ensured stable and continuous system operations by analyzing enterprise architecture and integrating core modules with upstream/downstream systems via .NET-based interfaces.
- Eliminated data bottlenecks by implementing advanced MSSQL indexing, resulting in a significant reduction in system latency.
- Took over WMS operations on short notice and achieved **two months of zero downtime** through quick learning, proactive monitoring, and effective troubleshooting.
- Tech Stack: C#, .NET Framework/Core, MSSQL, Enterprise Architecture (MES/WMS)

Software Engineer *Navien, Seoul, South Korea*

[September 2022 – February 2024]

- Managed the end-to-end development lifecycle, bridging JavaScript-based front-end interfaces with high-performance .NET/Java back-end services.
- Built a Java/Spring-based logistics-tech tracking platform, **increasing user adoption from 30% to 90%** through UI refactoring and performance tuning.
- Architected a batch-processing data flow using MSSQL stored procedures to stabilize complex cross-platform system integration, eliminating daily downtime.
- Reduced licensing costs by **20 million KRW** annually by identifying inactive users and automating deactivation via Oracle SQL queries in the groupware system.
- Contributed to S&OP system development, including UI creation and MSSQL data modeling, enabling more accurate planning and data visibility.
- Led ERP(SAP)-CRM interface integration, performing large-scale MSSQL data analysis to support cross-department needs and operational efficiency improvements.
- Tech Stack: C#, Java/Spring, JavaScript, ASP.NET, MSSQL, Oracle SQL, AWS (EC2, S3, CloudFront, Route 53), RESTful APIs, CI/CD, JSON, SAP Integration, VBScript

Software Developer *GL, Daegu, South Korea*

[June 2020 – September 2022]

- Developed cognitive training and assessment software using C#, WPF, and .NET for clinical and training environments.
- Designed personalized cognitive assessment workflows and managed user data with MariaDB.
- Engineered a TCP/IP-based data transmission system for a 3-month clinical trial, ensuring seamless, **zero-error data collection** and synchronization of cognitive assessment results.
- Improved application stability and user experience through data-driven feature enhancements and feedback-based UI refinement.
- Tech Stack: C#, .NET Framework/Core, C++, MariaDB, XML, SVN

Education

B. S. Computer Science & Software Engineering *University of Washington Bothell, WA, US* [January 2016 – June 2017]

A. A. Computer Science *Shoreline Community College, WA, US*

[September 2017 – June 2019]
